REFERENCE / EXPERIENCE – USE OF HAKI Universal Offshore scaffolding

During the last 29 years Aker Stord has used HAKI scaffolding systems on all their projects, Our clients have been Statoil, Phillips, Shell, Hydro and BP among others.

HAKI scaffolding systems have covered all our requirements on major onshore and offshore projects, regarding upright, hanging and extruded scaffolding systems.

HAKI Universal modular scaffolding systems meet our requirements for safety, load capacity, speed and flexibility. Consequently, we use these scaffolding systems as light scaffolding in connection with sand blasting and painting, as well as in connection with our requirements to heavy loads in major constructions, inlet bridges, etc. In addition, HAKI scaffolding systems meet our requirements for access (step tower) and roller scaffolding.

Selection of HAKI scaffolding systems complies with our strict requirements for safety, quality and approval.

For many years HAKI AB has proved to be a reliable and serious supplier to Aker Kværner, an important alliance contributing with technical solutions, product development, training and follow-up.

After all these years Aker Stord and their customers are still very satisfied with HAKI AB. Therefore, it is a pleasure for us to recommend HAKI scaffolding systems.
